Report of Seed Certified in 1956 by State Certifying Agencies

Compiled by J. M. Saunders, Extension Agronomist

Seed certification is carried on in most States as an activity of the crop improvement association, State plant board, State department of agriculture, State seed commission, or State agricultural extension service. Almost all such certifying agencies are banded together in the International Crop Improvement Association, directors of which are named on the following pages. In addition to State crop improvement associations, certifying agencies in Canada are also members of the ICIA.

A major objective of seed certification is identification of varieties that are recommended for use by State experiment stations, State extension services, and the Agricultural Research Service of the United States Department of Agriculture. Certified seed must meet certain quality standards including all minimum standards established by the International Crop Improvement Association. Certification is indicated by a State certification tag sealed to the container.

The enclosed certified seed potato report was prepared by the Agricultural Marketing Service Crop Reporting Board, USDA, dated December 27, 1956.

In the following tables, acres shown passed final inspection but all the acreage might not have been harvested in 1956. For some crops it was necessary to estimate production.

As the seed improvement program is carried on in the United States, the responsibility for its success depends upon the close cooperation of several groups: (1) plant breeders of the State and Federal agricultural experiment stations and private plant breeders; (2) State extension agronomists; (3) State seed commissioners of the State departments of agriculture; (4) State crop improvement associations composed of progressive farmer-growers; and (5) the American seed trade. With these groups working together a sound, progressive program is assured.

CERTIFYING AGENCIES

The following is a list of crop improvement associations or agencies in charge of certification in the various States, with the name of the secretary or official in charge of certification appearing first. Where another individual prepared or returned the report on certification, his or her name is also listed. Associations and agencies constituting the International Crop Improvement Association in 1956 are starred (*).
